(54) Title: **SYSTEMS AND METHODS FOR TRANSFERRING ITEMS WITH RESTRICTED TRANSFERABILITY**

(57) Abstract: The invention is systems and methods for transferring items with restricted transferability. Initially, the systems and methods wait for a first consumer to make a request to transfer an item after having purchased the item from a provider. The systems and methods then send a request to transfer the item to the provider. This request may indicate inducements to the provider to authorize the transfer. If the transfer information is authorized, the systems and methods then present information regarding the item to other consumers. This information may be presented as part of a bidding interface or as part of an advertising interface. Once the second consumer submits a winning bid for the item when the information is presented in a bidding interface, or an acceptable offer when the information is presented in an advertising interface, the transfer of the item can then be completed with or without the assistance of an intermediary. When the transfer is

completed without the assistance of an intermediary, the first and second consumer may directly transfer the item and payment to each other. When the transfer is completed with the assistance of an intermediary, the first consumer may send the item to the intermediary and the second consumer may send payment to the intermediary. Once both the item and the payment have been received at the intermediary, the intermediary may send the item to the second consumer and all or part of the payment to the first consumer.

SYSTEMS AND METHODS FOR TRANSFERRING ITEMS
WITH RESTRICTED TRANSFERABILITY

Background of the Invention

The present invention is systems and methods
5 for transferring items with restricted transferability,
such as airline tickets, concert tickets, sporting
event tickets, hotel reservations, etc. More
particularly, the present invention relates to systems
and methods for enabling consumers to exchange
10 perishable items with the assistance from the providers
of the items.

Many popular high-cost and yet perishable
items, such as airline tickets, concert tickets, and
sporting event tickets, are sold by providers to
15 consumers with restrictions on the transferability of
those items. For example, with items such as airline
tickets, an airline (i.e., a provider) may sell an
airline ticket to a first passenger (i.e., a consumer)
twenty-one days in advance of the corresponding flight
20 at a heavily discounted fare. In such a case, the
airline would likely place restrictions on the
transferability of the airline ticket in order to
prevent the first passenger from selling the airline
ticket to a second passenger a few days before the
25 corresponding flight at less than what the airline

- 2 -

would charge the second passenger for the same ticket at that time. The airline prevents such a transfer in order to prevent the first passenger from competing with the airline for the sale of the airline ticket to the second passenger.

Such restrictions on transferability may greatly burden a consumer when, for reasons beyond the consumer's control, the consumer is forced to forgo the benefit of the perishable item. For example, a consumer who purchased non-transferable and non-refundable airline tickets may be forced to lose the value of those tickets when the consumer is unable to make the corresponding flight due to unforeseeable business or personal obligations, or any other suitable reason.

Accordingly, it is desirable to provide systems and methods for transferring perishable items with restrictions on transferability.

Summary of the Invention

It is therefore an object of the present invention to provide systems and methods which allow consumers to transfer items with restricted transferability to other consumers.

This and other objects of the present invention are accomplished in accordance with the principles of the invention by providing systems and methods which enable consumers to transfer goods and services with restricted transferability. Initially, these systems and methods wait for a first consumer to make a request to transfer an item (such as an airline ticket) after having purchased the item (directly or indirectly) from a provider (such as an airline). Once the request is received, the systems and methods then

- 3 -

compose and send a request to transfer the item to the provider. This request may indicate inducements to the provider that will be granted in exchange for the provider authorizing a transfer. If the transfer is
5 authorized, the systems and methods then present information regarding the item to other consumers, including a second consumer. This information may be presented as part of a bidding interface or as part of an advertising interface. Once the second consumer
10 submits a winning bid for the item when the information is presented in a bidding interface, or an acceptable offer when the information is presented in an advertising interface, the transfer of the item can then be completed with or without the assistance of an
15 intermediary (that may also be a provider of the systems and methods of the present invention). When the transfer is completed without the assistance of an intermediary, the first and second consumer may directly transfer the item and payment to each other.
20 When the transfer is completed with the assistance of an intermediary, the first consumer may send the item to the intermediary and the second consumer may send payment to the intermediary. Once both the item and the payment have been received at the intermediary, the
25 intermediary may send the item to the second consumer and all of the payment (or part of the payment when commission payments are made) to the first consumer.

Although the present invention is illustrated in connection with airline tickets, the invention is
30 equally applicable to other types of items, such as concert tickets, sporting event tickets, option contract rights, systems for which a non-refundable deposit has been paid (e.g., hotel rooms, car rentals, and restaurant reservations), etc.

- 4 -

Brief Description of the Drawings

Further features of the invention, its nature and numerous advantages will be more apparent from the following detailed description of the preferred
5 embodiments, taken in conjunction with the accompanying drawings, in which like reference characters refer to like parts throughout, and in which:

FIG. 1 is a transaction flow diagram of one
10 embodiment of the systems and methods of the present invention;

FIG. 2 is a flow diagram of a process for contacting a provider and providing notification to a consumer in accordance with one embodiment of the
15 present invention;

FIG. 3 is a flow diagram of a process for trading and transferring an item between consumers in accordance with one embodiment of the present invention; and

20 FIG. 4 is a block diagram of one embodiment of hardware that may be used to implement the present invention.

Detailed Description of the Preferred Embodiments

25 The present invention is now described in connection with FIGS. 1-4.

Turning first to FIG. 1, an example of a transaction flow 1 of one embodiment of the systems and methods of the present invention is illustrated. As
30 shown, a first consumer 3 may purchase an item at steps 6 and 7 by, for example, providing a provider 4 with a payment (step 6) and provider 4 providing first consumer 3 with an item (e.g., goods or services) (step 7). At any point after first consumer 3 purchases the

- 5 -

item at steps 6 and 7, first consumer 3 may submit a request at step 8 to a transfer system 2 to transfer the item.

When a transfer is requested, system 2 may prompt first consumer 3 for the desired conditions for the transfer. For example, system 2 may prompt first consumer 3 as to whether first consumer 3 would like to auction the item or simply post an advertisement for the item. System 2 may also prompt first consumer 3 for additional selling information, such as a minimum sale price for the item, or any other suitable information, or any combination thereof. Alternatively, this information may be submitted as part of the request.

Transfer system 2 may then request that provider 4 authorize a transfer of the item at step 9. System 2 may also ask provider 4 to verify that first consumer 3 is in fact in possession of the item.

When requesting authorization at step 9, system 2 may indicate an inducement to provider 4 that may be granted in exchange for the provider granting authorization to transfer the item. For example, a flat fee (such as \$50) may be paid to the provider system in order to release the restriction on transferability. As another example, a percentage fee (such as 10% of the transfer price) may be paid to the provider system. As yet another example, the fee paid may be higher when the provider system is also trying to sell similar items to other consumers (e.g., when a corresponding flight is not sold out) and lower otherwise. As still another example, the provider system may place additional restrictions on the transfer, such as a minimum transfer price, a maximum number of items that may be sold, or any other suitable

- 6 -

restriction, or any suitable combination thereof. As a further example, the provider system may be given the option of buying back the item at an agreed upon price. Any other suitable approach may also be used. At
5 step 10, system 2 may then receive an authorization or denial for the transfer. This authorization or denial may then be communicated to first consumer 3 at step 11.

Referring to FIG. 2, an example of a
10 process 20 for performing steps 8-11 of FIG. 1 is illustrated. As shown in FIG. 2, an interface may be presented at step 22 to consumer 3 that allows the consumer to create a consumer profile. The interface may, for example, prompt the consumer for his/her full
15 name, address(es), telephone number(s), e-mail address(es), credit card information, and any other information suitable for use by transfer system 2. This profile may then be stored in a database in system 2.

20 Upon creating the profile, consumer 3 may then request to transfer an item with restricted transferability at step 23. The consumer may request to transfer the item by auctioning or posting an advertisement for the item. Once consumer 3 has
25 requested to transfer the item, system 2 may contact provider 4 to request authorization to transfer the item at step 24. System 2 may use information in the consumer profile in requesting authorization. System 2 may also verify with provider 4 that consumer 3 is in
30 fact in possession of the item. For example, system 2 may query provider 4 for information on whether consumer 3 possesses the item. Alternatively, system 2 may request that consumer 3 provide any additional

- 7 -

information on the item, such as a serial number, to verify possession.

In response to the request made at step 24, provider 4 may authorize or deny the requested transfer at step 25. This authorization or denial may be provided via e-mail, telephone, printed mail, or any other suitable method. At step 26, when an authorization is granted, provider 4 may add any additional restrictions on transfer of the item, such as a minimum transfer price, a maximum number of items, additional contract terms, or any other suitable restriction, or any suitable combination thereof. Finally, at step 27, system 2 may then notify consumer 3 whether the requested transfer was authorized and what additional restrictions, if any, have been imposed. The system may, for example, relay the provider's decision to the consumer by sending an e-mail, pop-up message, printed message (which is mailed to the consumer), or any other suitable printed or electronic notification.

Turning back to FIG. 1, if the request to transfer the item is authorized, system 3 may then present information to consumers, including a second consumer 5, at step 19. Information may be provided in the form of an advertisement or as part of an auction system. In response to this information, a second consumer 5 may indicate a willingness to receive the item via an auction or in response to a posted advertisement, for example. Once a second consumer 16 has been found, the participation of system 2 in the transfer may be complete and consumers 3 and 5 may close the transfer through steps 14 and 15. As illustrated, closing the sale may include second consumer 5 sending money to first consumer 3 at step 14

- 8 -

and first consumer 3 sending the item to second consumer 5 at step 15.

Alternatively, system 2 may assist in closing the transfer on behalf of consumers 3 and 5. For example, system 2 may notify provider 4 of the transfer so that the provider 4 may void-out the item possessed by first consumer 3, and issue a new item to second consumer 5. As another example, system 2 may instruct second consumer 5 to send a payment to system 2 at step 17 and instruct first consumer 3 to send the item to system 2 at step 16, after which system 2 will send the payment to first consumer 3 at step 18 and the item to second consumer 5 at step 19. In this capacity, system 2 may act as an intermediary or may use an external intermediary.

System 2 may charge a service fee for providing this service. This fee may be paid by first consumer 3, second consumer 5, and/or provider 4. The fee may be subtracted from the payment made at step 17, for example. Alternatively, a payment could be made from first consumer 3 at the time of submitting the request at step 8.

In order to verify the authenticity of first consumer 3 and second consumer 5, and to insure performance of their obligations, each consumer may be prompted by system 2 to enter suitable information such as a name, an address, a telephone number, a credit card number, a social security number, or any other suitable information, or any combination thereof, at any time.

Turning to FIG. 3, an example of a process 30 for performing steps 12-15 of FIG. 1 is illustrated. As shown at step 31, system 2 may retrieve request information regarding transferring of the item that was

- 9 -

previously submitted by first consumer 3 (e.g., asking price, item description, bidding duration, whether to auction or advertise the item, etc.). In one suitable approach, first consumer 3 may decide to post an advertisement and accept the first bid when, for example, the consumer possesses an item which expires in a few days. In another suitable approach, the consumer may decide to auction an item when, for example, the consumer desires to obtain the best possible offer gained through bidding competition.

At step 32, system 2 uses this information to determine whether first consumer 3 wants to advertise or auction the item. When the consumer desires to auction the item, the system may add the item to a bidding interface at step 33. At step 34, second consumer 5 may be presented with this interface in order to enable that consumer to place a bid on the item. This interface preferably facilitates the consumer inputting bidding information at step 35. Bidding information may include the consumer's name, billing address, shipping address, bid, and/or any other suitable information. At step 36, the system may then determine if the auctioning period is over. If the auctioning period is not over, process 30 may loop back to step 34 and allow additional bids to be placed. In this example, system 2 will provide the item to the consumer with the best bid placed at step 34 prior to the end of a bidding period. The bidding period may be determined by consumer 3 or system 2 and may be for some period of time after a first bid is received or until at least one bid is received after at least a minimum period of time.

If it is determined at step 32 that consumer 3 decided to post an advertisement at step 32,

- 10 -

however, system 2 may then add the item to an advertising interface at step 37. Second consumer 5 may be presented with this interface in order to facilitate offering to buy the item at step 38. When
5 second consumer 5 offers to buy the item, system 2 may provide a notification to first consumer 3 at step 39. For example, system 2 may provide the item to second consumer 5 when his offer matches the criteria of the request information. For example, the given offer must
10 be greater than or equal to an asking price.

Once system 2 has received an acceptable offer at step 39 or after the auctioning period has lapsed at step 36, system 2 may provide consumers 3 and 5 with options relating to transferring the item at
15 step 40. For example, the system may allow each consumer to send their respective item or payment to system 2. In this approach, system 2 preferably handles the processing and may charge each consumer with a handling fee. In another suitable approach,
20 system 2 may allow consumers 3 and 5 to send the item and payment directly to each other without intervention from system 2. Yet another suitable approach, system 2 may notify provider 4 of a transfer between consumers 3 and 5. In such a case, system 2 may require
25 provider 4, for example, to reissue tickets, reservations, or any other item to second consumer 5, and void the original item. Provider 4 may request additional information from each consumer 3 and 5, such as name, address(es), phone number(s), etc., in order
30 to complete the transfer of items. Any other suitable approach for transferring items may also be used.

The systems and methods of the present invention may be implemented using any suitable communication network. One embodiment of such a

- 11 -

communication network 40 is shown in FIG. 4. As illustrated, transfer system 14 may be implemented as a web site that is hosted on an Internet web page server 41, which may be any suitable server. A provider
5 system 45, a first consumer computer 42, and a second consumer computer 44 may be connected to Internet web page server 41, or any other suitable server, through any suitable Internet connections 43.

Internet web page server 41 may be any server
10 suitable for providing access to a web site operating as system 2. Internet web page server 41 may, for example, provide one or more web pages to first consumer computer 42 and second consumer computer 44 using one or more suitable protocols (e.g., the
15 HyperText Transfer Protocol (HTTP) and Transmission Control Protocol/Internet Protocol (TCP/IP)). The server may also run a database engine suitable for maintaining a database of consumer and item
information. In practice, one or more functions of
20 first consumer computer 42, second consumer computer 44, and the Internet web page server 41 may be integrated into a single server, or may be distributed across multiple servers.

Any suitable Internet connections 43 may be
25 used in communication network 40 in accordance with the present invention. For example, Internet connections 43 may be comprised in whole or in part of the Internet, an intranet, a public data network, a private data network, a wireless network, a cable
30 network, any other suitable data network or combination of networks, dial-up connections, etc.

Thus, systems and methods for transferring items with restricted transferability are provided. It will be understood that the foregoing is only

- 12 -

illustrative of the principles of the invention and
that various modifications can be made by those skilled
in the art without departing from the scope and spirit
of the invention, which is limited only by the claims
5 that follow.

- 13 -

What is claimed is:

1. A method for enabling a first consumer to transfer an item with restricted transferability, comprising:
 - receiving a request to transfer the item from the first consumer;
 - requesting authorization to transfer the item from a provider of the item;
 - presenting information on the item to a second consumer; and
 - transferring the item from the first consumer to the second consumer.
2. The method defined in claim 1 wherein the information is presented in a bidding interface.
3. The method defined in claim 1, further comprising:
 - contacting the provider to verify whether the first consumer possesses the item.
4. The method defined in claim 1, further comprising:
 - notifying the first consumer whether the provider authorized or denied the transfer.
5. The method defined in claim 1 wherein the information is presented in an advertising interface.
6. The method defined in claim 1, further comprising:
 - voiding the item with respect to the first consumer; and

- 14 -

reissuing the item to the second consumer.

7. The method defined in claim 1, wherein transferring the item from the first consumer to the second consumer comprises:

providing the first consumer with an opportunity to send the item to an intermediary; and
providing the second consumer with an opportunity to send a payment to the intermediary.

8. The method defined in claim 7, further comprising charging at least one of the first consumer, the second consumer, the provider with a fee.

9. The method defined in claim 8 wherein the fee is a flat fee.

10. The method defined in claim 1, wherein transferring the item from the first consumer to the second consumer comprises:

providing the first consumer with an opportunity directly to send the item to the second consumer; and

providing the second consumer with an opportunity directly to send a payment to the first consumer.

11. The method defined in claim 1, further comprising providing the provider with an opportunity to place additional restrictions on the item.

- 15 -

12. The method defined in claim 11 wherein the additional restrictions is at least one of a minimum transfer price, maximum number of items, and a contract extension.
